

The IWFA marketing guidelines reference the NFRC test standards for testing and calculating the solar performance values used on most manufacturers data sheets. Occasionally the IWFA receives requests on how to obtain independent testing of a film. For information on testing please contact Optical Data Associates in Tuscon, AZ. They are the only US lab certified to supply data to the International Glazing Database. More information can be found at [Optical Data Associates | About Us](#) or by contacting Dr. Michael Jacobson at 520-748-7333 or at optical@opdata.com.
